

Web Application Design & Development

TEAM PROJECT 1

Task: Create a website for a fictitious company incorporating aspects of HTML, CSS & JavaScript.

Deadline: **Mon, February 3rd 2020 @ 9AM** (30 hrs of class time to work on project).

Guidelines: Work independently or in a team of 2-3 people.

Site must contain **at least 4** pages (A home page and 3 others).

Styling must be consistent on all pages and mobile-responsive to work on a **desktop**, **tablet** and **mobile** device.

Navigation must be full (no dead-ends) for the entire site.

You may use lorem ipsum for large sections of text content but not for page titles, headings, or navigation elements.

An HTML form must be used on at least one page of your site.

Be creative with the styling. Keep styling consistent on each page of the site!

Incorporate at least one JavaScript feature on at least one page of the site (SIMPLE POP-UP ALERT MESSAGES DO NOT COUNT).

Code must be properly indented, readable and commented when necessary.

Submit work as a github repository (link can be slacked to me when project is complete).
